Document Revision History

Version	Date	Status	Author	Summary of Changes
Version 1	3/2/18		Rohit Gupta	Initial Draft
Version 2	5/2/18		Cathy Mallet	Minor edits

Overview

The purpose of this document is to explain the additional audit events that are added to Accelerator Pack for all provisioning actions on an application.

Application After Provisioning Rule

All applications must have an after provisioning rule, “Rule-Audit-Framework”, to enable Accelerator Pack auditing. This rule can be saved from the IdentityIQ Application Administrative Wizard, or during application onboarding it is saved automatically from the Self Service Onboarding Wizard. This rule calls the Java method “**logRoadAuditEvents**” to log all provisioning events.

The New Account Entitlements Dependency Feature is enabled on an application via an after-provisioning rule called “Rule-AccountCreation-Dependency-Framework”. This rule provisions dependency application entitlements. A “**logRoadAuditEvents**” Java method has been added to this rule to ensure that Accelerator Pack audits are logged after the provisioning of dependency entitlements.

Workflow After Provisioning Step

All Accelerator Pack workflows start from a wrapper workflow named “Workflow-FrameWork-Wrapper”. An After Provisioning Step is added to this workflow that calls the “**logRoadAuditEvents**” Java method to audit following the provisioning items. These provisioning items doesn’t invoke the out-of-the-box After Provisioning rule on an application. As a result, this workflow step is required.

- Manual work items provisioning
- IdentityIQ internal request provisioning (for example, Roles)
- Ticket integration-based applications provisioning

Audit Events

There are nine new audit events that have been added to Accelerator Pack to capture all provisioning actions. Wee the table below for the description of these new audit events.

Note: One Audit Event will be logged for every account request that is part of a provisioning plan.

Audit Name	Audit Display Name	Description
roadLifeCycleEventRequest	Accelerator Pack LifeCycle Event	This is used for all Accelerator Pack LifeCycle Events • JOINER FEATURE • JOINER REHIRE FEATURE • JOINER LOA FEATURE • JOINER LTD FEATURE • LEAVER LOA FEATURE • LEAVER FEATURE • LEAVER LTD FEATURE • REVERSE LEAVER FEATURE • ATTRIBUTE SYNCHRONIZATION FEATURE • MANAGER CERTIFICATION ALLOW EXCEPTION FEATURE • NATIVE CHANGE DETECTION FEATURE • SER LINK FEATURE
roadCertificationLifeCycleEventRequest	Accelerator Pack LifeCycle Certification Event	This is used for Mover and Native Change Feature Certification Events
roadInteractiveRequest		This is used for request coming from QuickLinks and Interactive Pages <u>QuickLinks</u> • Manage User Access • Manage Privileged Access • Create Identity ○ This kicks off Joiner Event for new Identity • Edit Identity

		○ This kicks off Attribute Sync Event for changed Identity • Register Identity • Change Password • Manage Passwords <u>Interactive Pages</u> • Batch Requests • Forgot Password • Password Expired Login
roadOperationalRequest	Accelerator Pack Operational Requests	This is used for requests originated from Operational Task QuickLink • Terminate Identity • Process Identity Event • Recover Identity Access
roadBackGroundServiceRequest	Accelerator Pack Background Service Requests	This is used for requests coming from background services or tasks • Password Interceptor • Privileged Service Account Password Expiration • Removal of Form Based Role • Reassignment of Service Owners to their Managers • X days Pending Leaver Requests • “Extended Form” application request ○ Form Based Role applications that doesn’t have provisioning channel for certain form fields on the form
roadRoleEntitlementAssignmentsRequest	Accelerator Pack Automated	This audit event is for the RBAC Roles that are assigned via Assignment Rules

	Assignment Event	Please Note: This is not applied to applications that require tickets for provisioning
roadPolicyViolationDeprovisioningRequest	Accelerator Pack Policy Violation Requests	This audit event is for revoke actions on policy violations Please Note: This is not applied to applications that require tickets for provisioning
roadCertificationRemediation	Accelerator Pack Certification Revocation Requests	This audit event is for the revoke action on the certification items. Please Note: This is not applied to applications that require tickets for provisioning
roadWebservicesRequest	Accelerator Pack Web services Request	This audit event is for the request coming external applications to IdentityIQ via REST/SCIM. Please Note: This is only applicable to “Workflow-FrameWork-Wrapper” workflow invocation via SCIM/REST Api and “requestType” argument value “EXTERNAL FEATURE” is passed to the workflow

Enable/Disable Audits

These new Accelerator Pack audits can be enabled/disabled from the out-of-the-box Global Settings / Audit Configuration Page.

Accelerator Pack Lifecycle Event	☒
Accelerator Pack Lifecycle Certification Event	☒

Accelerator Pack Audit Event Attributes

Please see the table below for Audit Event attributes and their possible values.

Audit Attribute Name	Description
Source	The value of this attribute will either be the requestor name for Interactive Requests, or “Scheduler” or “RequestHandler” for background events
Action	Display Name of the Audit Event
Account Name	Native Id from the Account Request
Target	Identity Name
Attributes	• CertificationName: The name of the certification • Operation: Account Request Operation • csvAttributeRequests: All Attribute Requests (Operation, Name, and Value) • csvErrors: All Errors from Provisioning Plan, Account Request, and Attribute Request

	• csvWarnings: All Warnings from Provisioning Plan, Account Request, and Attribute Request • csvTicketIds: All Ticket Ids from Provisioning Plan, Account Request, and Attribute Request • csvStatuses: All Provisioning Statuses from Provisioning Plan, Account Request, and Attribute Request • Error: Error from provisioning plan • Flow ○ AccessRequest (Manage User Access or Manage Privileged Access or Batch Request) ○ AccountsRequest (Manage Accounts) ○ ExpirePassword (Password Expiration Login) ○ ForgotPassword (Forgot Password) ○ PasswordsRequest (Change Password or Manage Passwords) ○ IdentityCreateRequest (Create Identity) ○ IdentityEditRequest (Edit Identity) ○ Registration (New User Registration) ○ External (External Api Request, only if Wrapper workflow is invoked and “requestType” argument value “EXTERNAL FEATURE” is passed to the workflow) ○ Lifecycle (All LifeCycle Events) ○ NewAccountDependency (New Account Entitlements Provisioning) ○ FormRole (Removal of Form Role) ○ LeaverXDays (X Days Termination)
--	--

	○ Recovery (Operational Recovery Tool) ○ ServiceAccountOwners (Service Account Owner Reassignment) • Source ○ Batch (Batch Request) ○ LCM (Access Request) ○ IdentityRefresh (IdentityRefresh Assignments) ○ Rule (Rule Assignments) ○ Certification (Certification Revocation) ○ PolicyViolation (Policy Violation Remediations) ○ Task (Back Ground Task)
Instance	requestType variable value from Workflow. List of possible values: • JOINER FEATURE • JOINER REHIRE FEATURE • JOINER LOA FEATURE • JOINER LTD FEATURE • LEAVER LOA FEATURE • LEAVER FEATURE • LEAVER LTD FEATURE • REVERSE LEAVER FEATURE • ATTRIBUTE SYNCHRONIZATION FEATURE • MANAGER CERTIFICATION ALLOW EXCEPTION FEATURE • NATIVE CHANGE DETECTION FEATURE • SER LINK FEATURE • CART REQUEST FEATURE • MANAGE ACCOUNTS FEATURE • CREATE IDENTITY FEATURE • EDIT IDENTITY FEATURE • CHANGE PASSWORD FEATURE • REGISTRATION FEATURE • SER UNLINK FEATURE • RECOVERY TOOL FEATURE

	• IMMEDIATE TERMINATION FEATURE • PASSWORD INTERCEPTOR FEATURE • PRIVILEGED SERVICE PASSWORD EXPIRATION FEATURE • REQUEST MANAGER FEATURE • EXTERNAL FEATURE • MOVER FEATURE
Interface	Random Id to tie all provisioning plans of a provisioning project. It will be empty if the audit event is logged from the after provisioning rule
Value 1	Target Integration from the Provisioning Plan. Here are some samples: • Target Integration:ServiceNowTicketIntegration • Target Integration:Active Directory • Target Integration: IIQ
Value 2	Status from Provisioning Plan
Value 3	Provisioning Plan Ticket Id
Value 4	IdentityIQ Request Id
