Version 1	3/2/18		Rohit Gupta	

1. Overview

This document outlines the external integration of Accelerator Pack with either REST or SCIM Api

2. SCIM/REST Apis

Accelerator Pack integrates with SCIM/REST **Workflow Invocation Api** to handle external requests.

3. Input Variables

Variable Name (* Required)	Description
identityName*	Name of the identity being processed (required)
launcher*	Name of the requestor
ticketId	Ticketing System Ticket Id
ticketManagementApplication	Name of the application or source in the IdentityIQ instance that handles ticket requests
flow*	External
requestType*	EXTERNAL FEATURE In case approvals are required. This can be configured in "Custom-ApprovalFrameWorkMappings"
workflowName	Workflow-FrameWork-Wrapper
extPolicyScheme	"None" or "Interactive". Default: Policy Scheme defined in custom artifact "Custom-Framework-Common-Settings" will be used
extSendRequestorNotifications	Submission, Completion, Provisioning Policy Form, Account Selection Form, and Preventive Policy Violation Form Notifications Either "True" or "False" Default: Accelerator Pack will send out notifications to Human Identity
plan or planMap*	ProvisioningPlan (Required)
foregroundProvisioning	"True" or "False" Default:False

trace	“True” or “False” Default:False
--------------	------------------------------------

4. Output Variables

Variable Name	Description
identityRequestId	Identity Request Id
spExtAttrs	Example spExtAttrs={requester=DEMO1, requestType=EXTERNAL FEATURE, identityRequestId=0000000109, source=LCM, flow=External, launcher=DEMO1}, identityRequestId=0000000109}, errors=null, status=null}
requestID	Task Result Id

5. Audit

Provisioning of External requests will be audited using Accelerator Pack Audit Event “roadWebservicesRequest”.
